

FIELD INFORMATION SHEET
PRINT AND SHARE FREELY

The apocalypse did not end civilization. It interrupted it.

Longlight is a shared science fiction world made for scale modelers. You build a model, file it with the Registry, and it becomes part of a growing record that everyone can see. You decide the story of your piece. We keep the ledger.

THE WORLD

It is 2146, about forty years after the day the advanced machines went dark. The world got back up and now runs on old iron and honest work, at roughly a 1980s mechanical level. Scattered through it are rare machines that still glow with a soft green light. That light is the Longlight, and finding what remains of it is what surveyors do.

HOW TO FILE A BUILD

Pick your build. Choose a subject type. Add a photo and a short field note in your own words. Choose your allegiance. Submit. The Registry assigns a permanent serial number and your build enters the record. Concepts, works in progress, and finished builds are all welcome.

THE THREE MARKS OF A LONGLIGHT BUILD

The Time: your build lives in 2146, patched, repaired, and kept running. The Tech: nothing newer than about 1980 still works, no live modern electronics. The Tone: a world rebuilding, not a wasteland.
